

What is Claimed is:

1. A handy karaoke equipment comprising:

an equipment body formed in imitation of a hand microphone which includes a grip portion of a thickness sufficient to permit a user to grip it by one hand and including a head portion which has a microphone integrally incorporated therein; and

a data cartridge detachably mounted in said equipment body and having image data and performed music data stored therein;

said equipment body including an operation section for selecting performed music and setting conditions for performance of the music selected;

said equipment body being provided therein with an audio signal processing section for converting the performed music data read out of said data cartridge into a performance signal, combining said performance signal and a sound signal inputted thereto from said microphone with each other to prepare a combined signal and converting the combined signal into an audio signal depending on the performance conditions;

said equipment body being provided therein with a video signal processing section for converting the image data read out of said data cartridge into a video signal.

2. A handy karaoke equipment as defined in claim 1, wherein said performance conditions include a tempo of the performed music selected, a key thereof and an echo.

3. A handy karaoke equipment as defined in claim 1, wherein said audio signal and video signal are outputted to an external equipment by cable.

4. A handy karaoke equipment as defined in claim 1, wherein only said audio signal is outputted to an external equipment by radio.

5. A handy karaoke equipment as defined in claim 1, wherein said equipment body is provided on a front surface thereof with a display for displaying said operation section and operation by said operation section; and

said equipment body is provided on a rear surface thereof with a connector in which said data cartridge is inserted.
